

## Fund Objective

Seeks positive, risk-managed returns independent of market direction.

## Strategy Description

The Core Alternative ETF (NYSE: CCOR) is an all-weather investment strategy that seeks consistent, risk-managed returns that are indifferent to market direction. The fund invests in US large cap stocks and actively balances the downside risk with a highly disciplined "protective-put" options strategy. Option positions are adjusted regularly based on market movement to maintain desired risk levels. The goal is to preserve potential long-term growth with "responsive" downside risk mitigation. In bull markets, the equities are expected to drive returns. In bear markets, the put options are expected to drive returns.

## Investor Benefits

- **Independent Returns:** Seeks consistent positive returns indifferent to market direction
- **Capital Preservation:** Disciplined risk-management process prioritizes consistent volatility mitigation through all market environments
- **Differentiated Alpha:** Attractive potential returns in a low return environment

## Why Invest In CCOR

- Active rebalancing of put protection prioritizes capital preservation with added benefit of Alpha generation
- Maintains 100% minimum notional protection on equities
- Seeks positive correlation to up markets, negative correlation to down markets. This may improve diversification benefits
- Long-term compounding of dividend growth equities without the concern of market uncertainty
- ETF structure allows high transparency and investor liquidity

## Total Returns

As of December 31, 2023

	YTD	1 Month	3 Months	6 Months	1 Year	3 Year	5 Year	Annualized Since Inception (5/24/17)	Cumulative Since Inception (5/24/17)
Core Alternative ETF NAV	-11.39%	0.08%	-0.13%	-0.84%	-11.39%	0.09%	1.85%	2.76%	19.71%
Core Alternative ETF Market Price	-11.92%	0.04%	-0.17%	-1.07%	-11.92%	-0.26%	1.80%	2.71%	19.34%

Returns for periods greater than one year are annualized. The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. Market price returns are based upon the midpoint of the bid/ask spread at 4:00 Eastern Time and do not represent the returns you would receive if you traded shares at other times. For performance data current to the most recent month end, please call 800-617-0004 (ETF INFO). Index returns are for illustrative purposes only and do not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in an index. Prior to 12/18/2019, the Fund was known as the Cambria Core Equity ETF.

## About Core Alternative Capital, LLC

Core Alternative Capital, LLC ("Core Alternative", "Core Alt", or the "Company") is an investment adviser registered with the U.S. Securities and Exchange Commission that was formed in 2019. Core Alt is an independent investment advisory firm focused on non-traditional asset management and alternative investment strategies. The Company's overall goal is to preserve and grow capital by producing positive absolute and risk-adjusted returns, while attempting to produce unique exogenous return streams which are uncorrelated to broad equity, fixed income, and alternative assets and strategies.

A balance between risk and return

**To determine if this Fund is an appropriate investment for you, carefully consider the Fund's investment objectives, risk factors, charges and expense before investing. This and other information can be found in the Fund's full and summary prospectus which may be obtained by calling 800-617-0004 (ETF INFO) or visiting our website at [www.corealtnfunds.com](http://www.corealtnfunds.com). Read the prospectus carefully before investing or sending money.**

CCOR is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will produce the intended results and no guarantee that the Fund will achieve its investment objective. This could result in the Fund's underperformance compared to other funds with similar investment objectives.

ETFs are subject to commission costs each time a "buy" or "sell" is executed. Depending on the amount of trading activity, the low costs of ETFs may be outweighed by commissions and related trading costs.

Shares are bought and sold at market price (closing price) not net asset value (NAV) are not individually redeemed from the Fund. Market price returns are based on the midpoint of the bid/ask spread at 4:00 pm Eastern Time (when NAV is normally determined), and do not represent the return you would receive if you traded at other times. Buying and selling shares will result in brokerage commissions. Brokerage commissions will reduce returns.

There is no guarantee that the Fund will achieve its investment goal. Investing involves risk, including the possible loss of principal.

There is no guarantee dividends will be paid. Diversification may not protect against market loss.

An option premium is the dollar price per share that an option holder pays the option writer for the option privileges.

Derivatives are financial instruments that derive their performance from an underlying reference asset, such as an index. Derivatives, such as put options, are often more volatile than other investments and may magnify the Fund's gains or losses. A small investment in a derivative can have a large impact on the performance of the Fund as derivatives can result in losses in excess of the amount invested. Options used by the Fund to offset its exposure to tail risk or reduce volatility may not perform as intended. There can be no assurance that the Fund's put option strategy will be effective. The put option strategy may not fully protect the Fund against declines in the value of its portfolio securities.

Standard deviation: A standard deviation is a statistic that measures the dispersion of a dataset relative to its mean. The standard deviation is calculated as the square root of variance by determining each data point's deviation relative to the mean. If the data points are further from the mean, there is a higher deviation within the data set; thus, the more spread out the data, the higher the standard deviation. The implication is that a higher standard deviation represents higher potential risk.

Alpha: Alpha is a term used in investing to describe an investment strategy's ability to beat the market, or its "edge." Alpha is thus also often referred to as "excess return" or "abnormal rate of return," which refers to the idea that markets are efficient, and so there is no way to systematically earn returns that exceed the broad market as a whole.

Beta: Beta is a measure of the volatility—or systematic risk—of a security or portfolio compared to the market as a whole. Beta is used in the capital asset pricing model (CAPM), which describes the relationship between systematic risk and expected return for assets (usually stocks).

Correlation: A statistical measure of how two securities move in relation to one another.

Down Capture Return: A measure of the manager's performance in periods when the benchmark goes down. This is shown as a percentage return value.

The S&P 500® is widely regarded as the best single gauge of large-cap U.S. equities. There is over USD 9.9 trillion indexed or benchmarked to the
