CORE ALTERNATIVE ETF – FUND SUMMARY

Investment Objective

The Core Alternative ETF (the “Fund”) seeks capital appreciation and capital preservation with a low correlation to the broader U.S. equity market.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Shareholder Fees (<i>fees paid directly from your investment</i>)	None
Annual Fund Operating Expenses (<i>expenses that you pay each year as a percentage of the value of your investment</i>)	
Management Fee	1.05%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses*	0.02%
Total Annual Fund Operating Expenses	1.07%

* “Other Expenses” include interest expense. Interest expense is borne by the Fund separately from the management fees paid to the Adviser.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$109 **3 Years:** \$340 **5 Years:** \$590 **10 Years:** \$1,306

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. For the fiscal year ended April 30, 2023, the Fund’s portfolio turnover rate was 19% of the average value of its portfolio.

Principal Investment Strategies

To achieve its investment objective, the Fund uses a combination of several strategies to produce capital appreciation while reducing risk exposure across market conditions.

The Fund invests primarily in U.S. equity securities that tend to offer current dividends. The Fund focuses on high-quality companies that have prospects for long-term total returns as a result of their ability to grow earnings and their willingness to increase dividends over time. These stocks typically – but not always – will be large-cap and show potential for increasing dividends. The Fund seeks to be diversified across industry sectors and regions. At all times, the Fund maintains long positions on index put options, which can protect the Fund from a significant market decline that may occur over a short period of time. The value of an index put option generally increases as the prices of the stocks constituting the index decrease and decreases as those stocks increase in price. From time to time, the Fund may reduce its holdings of put options, resulting in an increased exposure to a market decline. From time to time the Fund may also opportunistically buy or sell exchange traded index call options. The value of an index call option generally increases as the prices of the stocks constituting the index increase and decreases as those stocks decrease in price. Selling call options can serve to reduce the Fund’s volatility and provide steady cash flow; however, it also may reduce the Fund’s ability to profit from increases in the value of its equity portfolio. The combination of the diversified stock portfolio, the downside protection from index put options, and the occasional cash flow from the sale of index call options is intended to provide the Fund with the majority of the returns associated with equity market investments while exposing investors to less risk than other equity investments.

The Fund opportunistically invests where option pricing provides favorable risk/reward models and where gains can be attained independent of the direction of the broader U.S. equity market. The Fund uses proprietary models and analysis of historical portfolio profit and loss information to identify favorable option trading opportunities, including individual put and call options or spreads. In addition, the Fund’s investment strategy, with respect to both equity investing and options trading, takes into account fundamental business and macroeconomic factors (e.g., interest rates, strength of the dollar, and rate of domestic economic growth). However, the Fund employs discretionary trading models, and outputs from these models influence but do not dictate equity investment and options

trading decisions. The Fund aims to preserve capital, particularly in down markets (including major market drawdowns), by utilizing individual put options or spreads as a form of risk mitigation. Option positions are held until either they expire or are liquidated to either capture gains as option expirations approach or to adjust positions to reduce or prevent losses and to take other potentially profitable positions.

While the Fund's exposure to sectors may change over time, as of June 30, 2023, the Fund had significant exposure to companies in the financial services, health care, industrials, and information technology sectors.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your investment in the Fund:

- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, or the Fund's other service providers, market makers, Authorized Participants ("APs"), the Fund's primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund's business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders.
- **Derivatives Risk.** Put and call options are referred to as "derivative" instruments since their values are based on, or derived from, an underlying reference asset, such as an index. Derivatives can be volatile, and a small investment in a derivative can have a large impact on the performance of the Fund as derivatives can result in losses in excess of the amount invested. The return on a derivative instrument may not correlate with the return of its underlying reference asset. Derivative instruments may be difficult to value and may be subject to wide swings in valuations caused by changes in the value of the underlying instrument. Other risks of investments in derivatives include risks that the transactions may result in losses that partially or completely offset gains in portfolio positions, risks associated with leverage, and risks that the derivative transaction may not be liquid. Derivative instruments may create economic leverage in the Fund, which magnifies the Fund's exposure to the underlying instrument.
- **Dividend Paying Security Risk.** Securities that pay high dividends as a group can fall out of favor with the market, causing these companies to underperform companies that do not pay high dividends. Also, companies owned by the Fund that have historically paid a dividend may reduce or discontinue their dividends, thus reducing the yield of the Fund.
- **Equity Investing Risk.** The values of equity securities could decline generally or could underperform other investments due to factors affecting a specific issuer, market or securities markets generally.
- **ETF Risks.** The Fund is an exchange-traded fund ("ETF") and, as a result of its structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading Risk.* Although Shares are listed for trading on the NYSE Arca, Inc. (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than the Shares.

- **Hedging Risk.** Options used by the Fund to reduce volatility may not perform as intended. There can be no assurance that the Fund’s option strategy will be effective. It may expose the Fund to losses, *e.g.*, option premiums, to which it would not have otherwise been exposed if it only invested in U.S. government bonds or U.S. government bond ETFs. Further, the option strategy may not fully protect the Fund against declines in the value of its portfolio securities.
- **Large-Capitalization Risk.** The Fund’s investments in large-capitalization companies may underperform other segments of the market because large-capitalization companies may be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes, and may not be able to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion.
- **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that the investment adviser’s judgments about the attractiveness, value and potential appreciation of particular investments and strategies for the Fund will be correct or produce the desired results or that the Fund will achieve its investment objective. If the investment adviser fails to accurately evaluate market risk or appropriately react to current and developing market conditions, the Fund’s share price may be adversely affected.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund’s NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. In addition, local, regional or global events such as war, including Russia’s invasion of Ukraine, acts of terrorism, spread of infectious diseases or other public health issues, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets. It is unknown how long circumstances related to the COVID-19 pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and what additional implications may follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.
- **Models and Data Risk.** When models and data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Some of the models used to construct the Fund are predictive in nature. The use of predictive models has inherent risks. For example, such models may incorrectly forecast future behavior, leading to potential losses. In addition, in unforeseen or certain low-probability scenarios (often involving a market disruption of some kind), such models may produce unexpected results, which can result in losses for the Fund. Furthermore, because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data.
- **Options Risk.** The prices of options may change rapidly over time and do not necessarily move in tandem with the price of the underlying securities. Writing index call options reduces the Fund’s ability to profit from increases in the value of the Fund’s equity portfolio, and purchasing put options may result in the Fund’s loss of premiums paid in the event that the put options expire unexercised. To the extent that the Fund reduces its put option holdings relative to the number of call options sold by the Fund, the Fund’s ability to mitigate losses in the event of a market decline will be reduced. When the Fund sells an option, it gains the amount of the premium it receives, but also incurs a liability representing the value of the option it has sold until the option is either exercised and finishes “in the money,” meaning it has value and can be sold, or the option expires worthless, or the expiration of the option is “rolled,” or extended forward. The value of the options in which the Fund invests is based partly on the volatility used by market participants to price such options (*i.e.*, implied volatility). Accordingly, increases in the implied volatility of such options will cause the value of such options to increase (even if the prices of the options’ underlying stocks do not change), which will result in a corresponding increase in the liabilities of the Fund under such options and thus decrease the Fund’s NAV.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.
 - *Financial Services Sector Risk.* Performance of companies in the financial services sector may be adversely impacted by many factors, including, among others, government regulations, economic conditions, credit rating downgrades, changes in interest rates, and decreased liquidity in credit markets. This sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted.

- *Health Care Sector Risk.* Companies in the health care sector are subject to extensive government regulation and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure (including price discounting), limited product lines, an increased emphasis on the delivery of healthcare through outpatient services, loss or impairment of intellectual property rights and litigation regarding product or service liability.
- *Industrial Sector Risk.* Issuers in the industrial sector are affected by supply and demand, both for their specific product or service and for industrial sector products in general. The products of such issuers may face obsolescence due to rapid technological developments and frequent new product introduction. Government regulations, world events, economic conditions and exchange rates affect the performance of companies in the industrial sector. Issuers in the industrial sector may be adversely affected by liability for environmental damage, product liability claims and exchange rates. The industrial sector may also be adversely affected by changes or trends in commodity prices, which may be influenced by unpredictable factors.
- *Information Technology Sector Risk.* Technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Technology companies may have limited product lines, markets, financial resources or personnel. The products of technology companies may face obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the technology sector are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies.
- **Tax Risk.** The use of derivatives strategies, such as writing (selling) and purchasing options, involves complex rules that will determine for income tax purposes the amount, character and timing of recognition of the gains and losses the Fund realizes in connection therewith. To the extent such options are governed by section 1256 of the Internal Revenue Code of 1986, as amended (the “Code”), gains and losses resulting from the expiration, exercise, or closing of the non-equity options are treated as 60% long-term capital gain or loss and 40% short-term capital gain or loss (hereinafter, “blended gain or loss”). In addition, such options governed by section 1256 of the Code issued by the Fund will be treated as sold for market value on the last day of the Fund’s fiscal year, and gain or loss recognized as a result of such deemed sale will be blended gain or loss. These rules may operate to accelerate the amount that the Fund must distribute to satisfy its distribution requirement (*i.e.*, with respect to the portion treated as short-term capital gain, which will be includible in investment company taxable income and thus taxable to its shareholders as ordinary income when distributed to them), and to increase the net capital gain the Fund recognizes, even though the Fund may not have closed the transactions and received cash to pay the distributions. To the extent the Fund writes options that are not subject to the rules of section 1256 of the Code, the amount of the premium received by the Fund for writing such options will be entirely short-term capital gain to the Fund. In addition, if such an option is closed by the Fund, any gain or loss realized by the Fund as a result of the closing the transaction will also be short-term capital gain or loss. If the holder of a put option exercises the holder’s right under the option, any gain or loss realized by the Fund upon the sale of the underlying security pursuant to such exercise will be short-term or long-term capital gain or loss to the Fund depending on the Fund’s holding period for the underlying security. In addition, equity securities that are hedged with put options may not be eligible for long-term capital gains tax treatment.

Performance

The performance information presented below provides some indication of the risks of investing in the Fund by showing the extent to which the Fund’s performance can change from year to year and over time. The bar chart below shows the Fund’s performance for calendar years ended December 31. The table illustrates how the Fund’s average annual returns for the 1 year, 5 year, and since inception periods compare with those of the S&P 500 Index, which reflects a broad measure of market performance. The Fund’s past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Updated performance information is available on the Fund’s website at www.corealtnfunds.com.

Prior to the commencement of the Fund’s operations on December 18, 2019, the Fund operated as the Cambria Core Equity ETF (the “Predecessor Fund”), a series of Cambria ETF Trust, an open-end investment company registered under the Investment Company Act of 1940 (the “1940 Act”) that had the same investment objective and strategies as the Fund since the Predecessor Fund’s inception on May 23, 2017. The Fund assumed the NAV and performance history of the Predecessor Fund. **Performance shown in the bar chart and table for periods prior to December 18, 2019 is that of the Predecessor Fund and is not the performance of the Fund.** The Fund’s objective, policies, guidelines, and restrictions are in all material respects equivalent to those of the Predecessor Fund, which was created for reasons entirely unrelated to the establishment of a performance record. The Predecessor Fund was reorganized into the Fund at the inception of the Fund.

The Predecessor Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

Calendar Year Total Returns

The calendar year-to-date total return of the Fund as of June 30, 2023 was -10.64%. During the period of time shown in the bar chart, the highest quarterly return was 6.02% for the quarter ended December 31, 2022, and the lowest quarterly return was -2.60% for the quarter ended March 31, 2018.

Average Annual Total Returns (for periods ended December 31, 2022)

Core Alternative ETF	1-Year	5-Years	Since Inception*
Return Before Taxes	2.98%	5.33%	5.51%
Return After Taxes on Distributions	2.70%	5.03%	5.20%
Return After Taxes on Distributions and Sale of Shares	1.95%	4.13%	4.28%
S&P 500 Index (reflects no deduction for fees, expenses, or taxes)	-18.11%	9.42%	10.72%

* The Predecessor Fund commenced operations on May 23, 2017.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account ("IRA") or other tax-advantaged accounts.

Portfolio Management

<i>Adviser</i>	Core Alternative Capital, LLC (the "Adviser")
<i>Portfolio Managers</i>	David Pursell, Managing Partner of the Adviser, has been a portfolio manager of the Fund since its inception in 2019 and was previously a co-portfolio manager of the Predecessor Fund from its inception in 2017 Danny Mack, Chief Operating Officer with the Adviser, has been a portfolio manager of the Fund since its inception in 2019 Peter Simasek, Portfolio Manager with the Adviser, has been a portfolio manager of the Fund since 2021

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the "bid-ask spread."

Recent information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.corealtfunds.com.

Tax Information

The Fund's distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is held in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND

Investment Objective

The Fund's investment objective may be changed by the Board of Trustees (the "Board") of Listed Funds Trust (the "Trust") without shareholder approval upon written notice to shareholders.

Principal Investment Risks

An investment in the Fund entails risks. The Fund could lose money, or its performance could trail that of other investment alternatives. The following provides additional information about the Fund's principal risks. It is important that investors closely review and understand these risks before making an investment in the Fund. Just as in the Fund's summary section, the principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears.

- **Cybersecurity Risk.** With the increased use of technologies such as the Internet and the dependence on computer systems to perform business and operational functions, funds (such as the Fund) and their service providers may be prone to operational and information security risks resulting from cyber-attacks and/or technological malfunctions. In general, cyber-attacks are deliberate, but unintentional events may have similar effects. Cyber-attacks include, among others, stealing or corrupting data maintained online or digitally, preventing legitimate users from accessing information or services on a website, releasing confidential information without authorization, and causing operational disruption. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, or the Fund's other service providers, market makers, APs, the Fund's primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund's business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders. For instance, cyber-attacks or technical malfunctions may interfere with the processing of shareholder or other transactions, affect the Fund's ability to calculate its NAV, cause the release of private shareholder information or confidential Fund information, impede trading, cause reputational damage, and subject the Fund to regulatory fines, penalties or financial losses, reimbursement or other compensation costs, and additional compliance costs. Cyber-attacks or technical malfunctions may render records of Fund assets and transactions, shareholder ownership of Shares, and other data integral to the functioning of the Fund inaccessible or inaccurate or incomplete. The Fund also may incur substantial costs for cybersecurity risk management to prevent cyber incidents in the future. The Fund and its shareholders could be negatively impacted as a result.
- **Derivatives Risk.** The Fund may invest in derivatives, including in particular options contracts, to pursue its investment objective. The use of derivatives may expose the Fund to risks in addition to and greater than those associated with investing directly in the instruments underlying those derivatives, including risks relating to leverage, correlation (imperfect correlations with underlying instruments or the Fund's other portfolio holdings), high price volatility, lack of availability, counterparty credit, liquidity, valuation and legal restrictions. The use of derivatives also may expose the Fund to the performance of securities that the Fund does not own. To the extent the Fund engages in derivatives in an attempt to hedge certain exposures or risks, there can be no assurance that the Fund's hedging investments or transactions will be effective. In addition, hedging investments or transactions involve costs and may reduce gains or result in losses, which may adversely affect the Fund. The skills necessary to successfully execute derivatives strategies may be different from those for more traditional portfolio management techniques, and if the Adviser is incorrect about its expectations of market conditions, the use of derivatives also could result in a loss, which in some cases may be unlimited. Use of derivatives also may cause the Fund to be subject to additional regulations, which may generate additional Fund expenses. These practices also entail transactional expenses and may cause the Fund to realize higher amounts of short-term capital gains than if the Fund had not engaged in such transactions. Certain of the derivatives in which the Fund invests may trade (and privately negotiated) in the OTC market. OTC derivatives are complex and often valued subjectively, which exposes the Fund to heightened liquidity, mispricing and valuation risks. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to the Fund. In addition, OTC derivative instruments are often highly customized and tailored to meet the needs of the Fund and its trading counterparties. If a derivative transaction is particularly large or if the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price. As a result and similar to other privately negotiated contracts, the Fund is subject to counterparty credit risk with respect to such derivative contracts. Certain derivatives are subject to mandatory exchange trading and/or clearing, which exposes the Fund to the credit risk of the clearing broker or clearinghouse. While exchange trading and central clearing are intended to reduce counterparty credit risk and to increase liquidity, they do not make derivatives transactions risk-free. Certain risks also are specific to the derivatives in which the Fund invests.
 - *Options Risk.* The buyer of an option acquires the right, but not the obligation, to buy (a call option) or sell (a put option) a certain quantity of a security (the underlying security) or instrument, including a futures contract or swap, at a certain price up to a specified point in time. The seller or writer of an option is obligated to sell (a call option) or buy (a put option) the underlying instrument. When the Fund sells an option, it gains the amount of the premium it receives, but also incurs a liability representing the value of the option it has sold until the option is either exercised and finishes "in the money,"

meaning it has value and can be sold, or the option expires worthless, or the expiration of the option is “rolled,” or extended forward. The value of the options in which the Fund invests is based partly on the volatility used by market participants to price such options (*i.e.*, implied volatility). Accordingly, increases in the implied volatility of such options will cause the value of such options to increase (even if the prices of the options’ underlying stocks do not change), which will result in a corresponding increase in the liabilities of the Fund under such options and thus decrease the Fund’s NAV.

Options are often used to manage or hedge risk because they enable an investor to buy or sell an asset in the future at an agreed-upon price. Options also are used for other reasons, such as to manage exposure to changes in interest rates and bond prices; as an efficient means of adjusting overall exposure to certain markets; in an effort to enhance income; to protect the value of portfolio securities or other instruments; and to adjust portfolio duration.

Options are subject to correlation risk. The writing and purchasing of options are highly specialized activities as the successful use of options depends on the Adviser’s ability to predict correctly future price fluctuations and the degree of correlation between the markets for options and the underlying instruments. Exchanges can limit the number of positions that can be held or controlled by the Fund or the Adviser, thus limiting the ability to implement the Fund’s strategies. Options also are particularly subject to leverage risk and can be subject to liquidity risk. Because option premiums paid or received by the Fund are small in relation to the market value of the investments underlying the options, the Fund is exposed to the risk that buying and selling put and call options can be more speculative than investing directly in securities.

Exchange-traded index options give the holder of the option the right to buy (or to sell) a position in an index of securities to the writer of the option, at a certain price. Writing index call options reduces the Fund’s ability to profit from increases in the value of the Fund’s equity portfolio. Purchasing put options may result in the Fund’s loss of premiums paid in the event that the put options expire unexercised. To the extent that the Fund reduces its put option holdings relative to the number of call options sold by the Fund, the Fund’s ability to mitigate losses in the event of a market decline will be reduced.

The Fund also may purchase or sell call and put options on a “covered” basis. A call option is “covered” if the Fund owns the security underlying the call or has an absolute right to acquire the security without additional cash consideration (or, if additional cash consideration is required, cash or cash equivalents in such amount are segregated by the Fund’s custodian). As a seller of covered call options, the Fund faces the risk that it will forgo the opportunity to profit from increases in the market value of the security covering the call option during an option’s life.

The Fund is subject to the risk that a change in U.S. law and related regulations will impact the way the Fund operates, increase the particular costs of the Fund’s operation and/or change the competitive landscape. In October 2020, the SEC adopted a new rule governing a fund’s use of derivatives. The new rule, among other things, generally requires a fund to adopt a derivatives risk management program, appoint a derivatives risk manager to oversee the program and comply with an outer limit on fund leverage risk based on value at risk, or “VaR.” Certain funds may be exempted from these requirements if they use derivatives only to a limited extent and comply with certain other conditions set forth in the new rule. The Fund expects to use derivatives only to a limited extent and therefore, to be exempt from complying with many of the rule’s requirements. The new rule significantly changes the regulatory framework applicable to a fund’s use of derivatives, including by replacing the existing asset segregation regulatory framework in its entirety. The Fund The new rule may influence the extent to which the Fund will use derivatives, adversely affect the Fund’s performance, and increase costs related to the Fund’s use of derivatives.

- **Dividend Paying Security Risk.** Securities that pay high dividends as a group can fall out of favor with the market, causing these companies to underperform companies that do not pay high dividends. Also, changes in the dividend policies of and capital resources available to companies owned by the Fund that have historically paid a dividend may adversely impact the Fund’s yield if these companies reduce or discontinue their dividends. Lower priced securities in the Fund may be more susceptible to these risks. Past dividend payments are not a guarantee of future dividend payments.
- **Equity Investing Risk.** An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. Different types of equity securities tend to go through cycles of outperformance and underperformance in comparison to the general securities markets. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally. Recent unprecedented turbulence in financial markets, reduced liquidity in credit and fixed income markets, or rising interest rates may negatively affect many issuers worldwide, which may have an adverse effect on the Fund.
- **ETF Risks.** The Fund is an ETF and, as a result of its structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

- *Costs of Buying or Selling Shares Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors also will incur the cost of the difference between the price at which an investor is willing to buy Shares (the “bid” price) and the price at which an investor is willing to sell Shares (the “ask” price). This difference in bid and ask prices is often referred to as the “spread” or “bid/ask spread.” The bid/ask spread varies over time for Shares based on trading volume and market liquidity and is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund and/or increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling Shares, including bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
- *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility or periods of steep market declines and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. The market price of Shares during the trading day, like the price of any exchange-traded security, includes a “bid/ask” spread charged by the exchange specialist, market makers or other participants that trade Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Adviser believes that, under normal market conditions, large market price discounts or premiums to NAV will not be sustained because of arbitrage opportunities.
- *Trading Risk.* Although Shares are listed for trading on the Exchange and may be listed or traded on U.S. and non-U.S. stock exchanges other than the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to Exchange “circuit breaker” rules, which temporarily halt trading on the Exchange when a decline in the S&P 500[®] Index during a single day reaches certain thresholds (e.g., 7%, 13%, and 20%). Additional rules applicable to the Exchange may halt trading in Shares when extraordinary volatility causes sudden, significant swings in the market price of Shares. There can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Hedging Risk.** Options used by the Fund to reduce volatility may not perform as intended. There can be no assurance that the Fund’s option strategy will be effective. It may expose the Fund to losses, e.g., option premiums, to which it would not have otherwise been exposed if it only invested in stocks. Further, the option strategy may not fully protect the Fund against declines in the value of its portfolio securities.
- **Large-Capitalization Risk.** Investments in large-capitalization companies may go in and out of favor based on market and economic conditions and may underperform other market segments. Some large-capitalization companies may be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes, and may not be able to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion. As such, returns on investments in stocks of large-capitalization companies could trail the returns on investments in stocks of small and mid-capitalization companies.
- **Management Risk.** The Fund is actively managed and uses proprietary investment strategies and processes. There can be no guarantee that the Adviser’s judgments about the attractiveness, value and potential appreciation of particular investments and strategies for the Fund will be correct or produce the desired results and no guarantee that the Fund will achieve its investment objective or outperform other investment strategies over the short- or long-term market cycles. If the Adviser fails to accurately evaluate market risk or appropriately react to current and developing market conditions, the Fund’s share price may be adversely affected. Securities selected by the Adviser may not perform as expected. This could result in the Fund’s underperformance compared to other funds with similar investment objectives.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund’s NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of economic, political and global macro factors, including public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. In addition,

local, regional or global events such as war, including Russia's invasion of Ukraine, acts of terrorism, spread of infectious diseases or other public health issues, recessions, rising inflation, or other events could have a significant negative impact on the performance of the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets, which could have an adverse effect on the Fund.

The respiratory illness COVID-19 has spread globally for over three years, resulting in a global pandemic and major disruption to economies and markets around the world, including the United States. During this time, financial markets have experienced extreme volatility and severe losses, and trading in many instruments has been disrupted or suspended. Liquidity for many instruments has been greatly reduced for periods of time. Some sectors of the economy and individual issuers have experienced particularly large losses. Governments and central banks, including the Federal Reserve in the U.S., have taken extraordinary and unprecedented actions to support local and global economies and the financial markets. The impact of these measures, and whether they will be effective to mitigate the economic and market disruption, will not be known for some time. However, the rapid COVID-19 vaccination rollout in the United States and certain other developed countries, coupled with the passage of stimulus programs in the U.S. and abroad, have resulted in the re-opening of businesses, the elimination or reduction of quarantine and masking requirements, increased consumer demand, and the resumption of in-person schooling, travel and events. As a result, many global economies, including the U.S. economy, have either re-opened fully or decreased significantly the number of public safety measures in place that are designed to mitigate virus transmission. Despite these positive trends, the prevalence of new COVID-19 variants or other unforeseen circumstances may result in the continued spread of the virus throughout unvaccinated populations or a resurgence in infections among vaccinated individuals. As a result, it remains unclear if recent positive trends will continue in developed markets and whether such trends will spread world-wide to countries with limited access to effective vaccines that are still experiencing rising COVID-19 hospitalizations and deaths.

- **Models and Data Risk.** When models and data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. For example, by relying on models and data, the Adviser may be induced to buy certain investments at prices that are too high, to sell certain other investments at prices that are too low, or to miss favorable opportunities altogether. Similarly, any hedging based on faulty models and data may prove to be unsuccessful.

Some of the models used by the Adviser for the Fund are predictive in nature. The use of predictive models has inherent risks. For example, such models may incorrectly forecast future behavior, leading to potential losses on a cash flow and/or a mark-to-market basis. In addition, in unforeseen or certain low-probability scenarios (often involving a market disruption of some kind), such models may produce unexpected results, which can result in losses for the Fund. Furthermore, because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data.

All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect. However, even if market data is input correctly, "model prices" will often differ substantially from market prices, especially for instruments with complex characteristics, such as derivative instruments.

- **Sector Risk.** The Fund's investing approach may result in an emphasis on certain sectors or sub-sectors of the market at any given time. To the extent the Fund invests more heavily in one sector or sub-sector of the market, it thereby presents a more concentrated risk and its performance will be especially sensitive to developments that significantly affect those sectors or sub-sectors. In addition, the value of Shares may change at different rates compared to the value of shares of a fund with investments in a more diversified mix of sectors and industries. An individual sector or sub-sector of the market may have above-average performance during particular periods, but may also move up and down more than the broader market. The several industries that constitute a sector may all react in the same way to economic, political or regulatory events. The Fund's performance could also be affected if the sectors or sub-sectors do not perform as expected. Alternatively, the lack of exposure to one or more sectors or sub-sectors may adversely affect performance.
 - *Financial Services Sector Risk.* The financial services sector includes companies involved in such activities as banking, commercial and consumer finance, investment banking, brokerage, asset management, custody and insurance. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates. The profitability of companies in the financial services sector may be adversely affected by loan losses, which usually increase in economic downturns. In addition, the financial services sector in certain countries is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework, which may have an impact on the issuers included in the Underlying Index. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions.
 - *Health Care Sector Risk.* Companies in the health care sector are subject to extensive government regulation and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of

medical products and services, pricing pressure (including price discounting), limited product lines and an increased emphasis on the delivery of healthcare through outpatient services. Companies in the health care sector are heavily dependent on obtaining and defending patents, which may be time consuming and costly, and the expiration of patents may also adversely affect the profitability of these companies. Health care companies are also subject to extensive litigation based on product liability and similar claims. In addition, their products can become obsolete due to industry innovation, changes in technologies or other market developments. Many new products in the health care sector require significant research and development and may be subject to regulatory approvals, all of which may be time consuming and costly with no guarantee that any product will come to market.

- *Industrial Sector Risk.* The industrial sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Companies in the industrial sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrial sector may be adversely affected by environmental damages, product liability claims and exchange rates. The success of these companies is affected by supply and demand both for their specific product or service and for industrial sector products in general. The products of manufacturing companies may face product obsolescence due to rapid technological developments and frequent new product introduction. In addition, the industrial sector may also be adversely affected by changes or trends in commodity prices, which may be unpredictable.
- *Information Technology Sector Risk.* Technology companies are characterized by periodic new product introductions, innovations and evolving industry standards, and, as a result, face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Companies in the technology sector are often smaller and less experienced companies and may be subject to greater risks than larger companies; these risks may be heightened for technology companies in foreign markets. Technology companies may have limited product lines, markets, financial resources or personnel. The products of technology companies may face product obsolescence due to rapid technological developments and frequent new product introduction, changes in consumer and business purchasing patterns, unpredictable changes in growth rates and competition for the services of qualified personnel. In addition, a rising interest rate environment tends to negatively affect companies in the technology sector because, in such an environment, those companies with high market valuations may appear less attractive to investors, which may cause sharp decreases in the companies' market prices. Companies in the technology sector are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies. The technology sector may also be adversely affected by changes or trends in commodity prices, which may be influenced or characterized by unpredictable factors. Finally, while all companies may be susceptible to network security breaches, certain companies in the technology sector may be particular targets of hacking and potential theft of proprietary or consumer information or disruptions in service, which could have a material adverse effect on their businesses.
- **Tax Risk.** The writing of call options by the Fund may significantly reduce or eliminate its ability to make distributions eligible to be treated as qualified dividend income. Covered call options may also be subject to the federal tax rules applicable to straddles under the Code. If positions held by the Fund were treated as "straddles" for federal income tax purposes, or the Fund's risk of loss with respect to a position was otherwise diminished as set forth in Treasury regulations, dividends on stocks that are a part of such positions would not constitute qualified dividend income subject to such favorable income tax treatment in the hands of non-corporate shareholders or eligible for the dividends received deduction for corporate shareholders. In addition, generally, straddles are subject to certain rules that may affect the amount, character and timing of the Fund's recognition of gains and losses with respect to straddle positions by requiring, among other things, that: (1) any loss realized on disposition of one position of a straddle may not be recognized to the extent that the Fund has unrealized gains with respect to the other position in such straddle; (2) the Fund's holding period in straddle positions be suspended while the straddle exists (possibly resulting in a gain being treated as short-term capital gain rather than long-term capital gain); (3) the losses recognized with respect to certain straddle positions that are part of a mixed straddle and that are not subject to Section 1256 of the Code be treated as 60% long-term and 40% short-term capital loss; (4) losses recognized with respect to certain straddle positions that would otherwise constitute short-term capital losses be treated as long-term capital losses; and (5) the deduction of interest and carrying charges attributable to certain straddle positions may be deferred.

Temporary Defensive Positions

To respond to adverse market, economic, political, or other conditions, the Fund may invest up to 100% of its assets in a temporary defensive manner by holding all or a substantial portion of its assets in cash, cash equivalents, or other high quality short-term investments. Temporary defensive investments generally may include short-term U.S. government securities, commercial paper, bank obligations, repurchase agreements, money market fund shares, and other money market instruments. The Adviser also may invest in these types of securities or hold cash while looking for suitable investment opportunities or to maintain liquidity. In these circumstances, the Fund may be unable to achieve its investment objective.

PORTFOLIO HOLDINGS INFORMATION

Information about the Fund’s daily portfolio holdings is available at www.corealtnfunds.com. A complete description of the Fund’s policies and procedures with respect to the disclosure of the Fund’s portfolio holdings is available in the Fund’s Statement of Additional Information (the “SAI”).

MANAGEMENT

Investment Adviser

Core Alternative Capital, LLC, located at 3930 East Jones Bridge Road, Suite 380, Peachtree Corners, Georgia 30092, serves as the investment adviser for the Fund. The Adviser, subject to the oversight of the Board, provides an investment program for the Fund and manages the day-to-day investment of the Fund’s assets. The Adviser also arranges for transfer agency, custody, fund administration, distribution and all other services necessary for the Fund to operate. The Adviser is an SEC-registered investment adviser that provides investment advisory services to separately managed accounts and sub-advisory services to institutional clients, in addition to providing investment advisory services to the Fund.

For the services it provides to the Fund, the Adviser is entitled to a unified management fee, which is calculated daily and paid monthly, at an annual rate based on the Fund’s average daily net assets as set forth in the table below.

Fund	Management Fee
Core Alternative ETF	1.05%

Pursuant to an investment advisory agreement between the Trust, on behalf of the Fund, and the Adviser (the “Advisory Agreement”), the Adviser has agreed to pay all expenses of the Fund except the fee paid to the Adviser under the Advisory Agreement, interest charges on any borrowings, dividends, and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, and distribution fees and expenses (paid by the Trust under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act).

A discussion of the basis for the Board’s approval of the continuation of the Advisory Agreement is available in the Fund’s [Semi-Annual Report](#) to Shareholders dated October 31, 2022.

Portfolio Managers

The individuals identified below are jointly and primarily responsible for the day-to-day management of the Fund’s portfolio.

Mr. Pursell is a Managing Partner of the Adviser, which he founded in May 2019. He previously was a Senior Portfolio Manager with Cambria Investment Management, L.P. (“Cambria”) since March 2017. Mr. Pursell also managed Cambria’s corresponding separate account business. Prior to joining Cambria, Mr. Pursell worked for IFAM Capital as a Director and member of the investment committee. While at IFAM his responsibilities included asset management and the firm’s overall asset allocation strategy. Previous to this, Mr. Pursell worked at Stadion Money Management where he was a Senior Portfolio Manager of two of the firm’s mutual fund strategies. Prior to joining Stadion, Mr. Pursell was part of Morgan Stanley’s Investment Bank, within their Private Wealth Division. His background also includes roles at Merrill Lynch’s Private Banking and Investment Group. Mr. Pursell received a B.B.A in Finance and an M.B.A. from Emory University’s Goizueta Business School.

Mr. Mack is a Portfolio Manager and Chief Operating Officer with the Adviser. Prior to joining the Adviser in 2019, he was a Vice President at Cambria, focusing on portfolio management, investment analysis, and trading activities. Mr. Mack has held senior investment roles with several institutional and retail firms and has managed \$10 billion over his career focusing on alternative strategies, including hedge funds, tactical trading, and volatility management. Mr. Mack graduated from the Terry College of Business at the University of Georgia, where he studied Economics and Finance, and where he has served on the school’s Young Alumni Board.

Mr. Simasek is a Portfolio Manager with the Adviser. His responsibilities are focused on the macroeconomic and equity market strategies for the firm. Prior to joining the Adviser in 2021, Mr. Simasek served in an asset management role with PIMCO where he worked with multi-billion dollar corporate clients to design custom investment solutions and asset allocation strategies, and held prior roles in capital markets with Bank of America Merrill Lynch. He received his undergraduate education at the University of Virginia’s McIntire School of Commerce concentrating in finance/accounting. Mr. Simasek completed his doctoral studies in finance at Georgia Tech with a research agenda spanning various areas of fixed income and equity markets. He is a Chartered Financial Analyst charterholder.

The SAI provides additional information about the Portfolio Managers’ compensation structure, other accounts managed by the Portfolio Managers, and the Portfolio Managers’ ownership of Shares.

Other Service Providers

Quasar Distributors, LLC, a wholly-owned subsidiary of Foreside Financial Group, LLC (doing business as ACA Group) (the “Distributor”), serves as the principal underwriter and distributor of the Fund’s Shares. The Distributor’s principal address is 111 East Kilbourn Avenue, Suite 2200, Milwaukee, Wisconsin 53202. The Distributor will not distribute Shares in less than whole Creation Units, and it does not maintain a secondary market in the Shares. The Distributor is a broker-dealer registered under the Securities Exchange Act of 1934 and a member of the Financial Industry Regulatory Authority, Inc. (“FINRA”). The Distributor has no role in determining the policies of the Fund or the securities that are purchased or sold by the Fund and is not affiliated with the Adviser or any of its affiliates.

U.S. Bancorp Fund Services, LLC, doing business as U.S. Bank Global Fund Services, located at 615 East Michigan Street, Milwaukee, Wisconsin 53202, serves as the administrator and transfer agent for the Fund.

U.S. Bank National Association, located at 1555 North Rivercenter Drive, Suite 302, Milwaukee, Wisconsin 53212, serves as the custodian for the Fund.

Morgan, Lewis & Bockius LLP, located at 1111 Pennsylvania Avenue, N.W., Washington, D.C. 20004, serves as legal counsel to the Trust.

Cohen & Company, Ltd., located at 1835 Market Street, Suite 310, Philadelphia, Pennsylvania 19103, serves as the Fund’s independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

HOW TO BUY AND SELL SHARES

The Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from the Fund, and only APs may tender their Shares for redemption directly to the Fund, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor, and that has been accepted by the Fund’s transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (the “DTC”) or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC’s participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or “street name” through your brokerage account.

Frequent Purchases and Redemptions of Shares

The Fund imposes no restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by Fund shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly from the Fund, are an essential part of the ETF process and help keep Share trading prices in line with NAV. As such, the Fund accommodates frequent purchases and redemptions by APs. However, frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and lead to the realization of capital gains. The Fund’s fair valuation of its holdings consistent with the 1940 Act and Rule 2a-5 thereunder and its ability to impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by the Fund in effecting trades help to minimize the potential adverse consequences of frequent purchases and redemptions.

Determination of Net Asset Value

The Fund’s NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange (the “NYSE”), generally 4:00 p.m. Eastern time, each day the NYSE is open for business. The NAV is calculated by dividing the Fund’s net assets by its Shares outstanding.

In calculating its NAV, the Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. For example, the Fund generally values equity securities at their readily available market quotations. If such information is not available for an investment held by the Fund or is determined to be unreliable, the investment will be valued by the Adviser at fair value pursuant to procedures established by the Adviser and approved by the Board (as described below).

Fair Value Pricing

The Adviser has been designated by the Board as the valuation designee for the Fund pursuant to Rule 2a-5 under the 1940 Act. In its capacity as valuation designee, the Adviser has adopted procedures and methodologies to fair value Fund investments whose market prices are not “readily available” or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been de-listed or has had its trading halted or suspended; (ii) an investment’s primary pricing source is unable or unwilling to provide a price; (iii) an investment’s primary trading market is closed during regular market hours; or (iv) an investment’s value is materially affected by events occurring after the close of the investment’s primary trading market. Generally, when fair valuing an investment held by the Fund, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer’s business, recent trades or offers of the investment, general and/or specific market conditions and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies established by the Adviser. Due to the subjective and variable nature of determining the fair value of a security or other investment, there can be no assurance that the Adviser’s determined fair value will match or closely correlate to any market quotation that subsequently becomes available or the price quoted or published by other sources. In addition, the Fund may not be able to obtain the fair value assigned to an investment if the Fund were to sell such investment at or near the time its fair value is determined.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act and the rules thereunder limit investments by registered investment companies in the securities of other investment companies. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in section 12(d)(1), subject to certain terms and conditions, including that such investment companies enter into an agreement with the Fund.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Fund intends to pay out dividends in cash, if any, and distribute any net realized capital gains to its shareholders at least annually. The Fund will declare and pay capital gain distributions in cash, if any. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of certain important U.S. federal income tax considerations generally applicable to investments in the Fund. Your investment in the Fund may have other tax implications. Please consult your tax adviser about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws. This summary does not apply to Shares held in an IRA or other tax-qualified plans, which are generally not subject to current tax. Transactions relating to Shares held in such accounts may, however, be taxable at some time in the future. This summary is based on current tax laws, which may change.

The Fund intends to qualify each year for treatment as a regulated investment company (a “RIC”) within the meaning of Subchapter M of the Code. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, the Fund’s failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA, you need to be aware of the possible tax consequences when the Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (APs only).

Taxes on Distributions

The Fund intends to distribute, at least annually, substantially all of its net investment income and net capital gains. For federal income tax purposes, distributions of investment income are generally taxable as ordinary income or qualified dividend income. Taxes on distributions of capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Shares. Sales of assets held by the Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by the Fund for one year or less generally result in short-term capital gains and losses. Distributions of the Fund’s net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by the Fund as capital gain dividends (“Capital Gain Dividends”) will be taxable as long-term capital gains, which for non-corporate shareholders are subject to tax at reduced rates of up to 20% (lower rates apply to individuals in lower tax brackets).

Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by the Fund as “qualified dividend income” are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. Qualified dividend income generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that the Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends received deduction for the portion of dividends they receive from the Fund that are attributable to dividends received by the Fund from U.S. corporations, subject to certain limitations. For such dividends to be taxed as qualified dividend income to a non-corporate shareholder, the Fund must satisfy certain holding period requirements with respect to the underlying stock and the non-corporate shareholder must satisfy holding period requirements with respect to his or her ownership of the Fund’s Shares. Holding periods may be suspended for these purposes for stock that is hedged. The Fund’s investment strategies may limit its ability to make distributions eligible to be treated as qualified dividend income.

Shortly after the close of each calendar year, you will be informed of the amount and character of any distributions received from the Fund.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by the Fund before your investment (and thus were included in the Shares’ NAV when you purchased your Shares).

You may wish to avoid investing in the Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by the Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. Gains from the sale or other disposition of your Shares from non-U.S. shareholders generally are not subject to U.S. taxation, unless you are a nonresident alien individual who is physically present in the U.S. for 183 days or more per year. The Fund may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. Different tax consequences may result if you are a foreign shareholder engaged in a trade or business within the United States or if a tax treaty applies.

The Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that the shareholder is not subject to such withholding.

Taxes When Shares Are Sold on the Exchange

Provided that a shareholder holds Shares as capital assets, any capital gain or loss realized upon a sale or exchange of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the disposition of Shares. The ability to deduct capital losses may be limited.

The cost basis of Shares acquired by purchase will generally be based on the amount paid for the Shares and then may be subsequently adjusted for other applicable transactions as required by the Code. The difference between the selling price and the cost basis of Shares generally determines the amount of the capital gain or loss realized on the sale or exchange of Shares. Contact the broker through whom you purchased your Shares to obtain information with respect to the available cost basis reporting methods and elections for your account.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP’s aggregate basis in the securities delivered, plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP’s basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The Internal Revenue Service may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing “wash sales” (for an AP who does

not mark-to-market its holdings) or on the basis that there has been no significant change in economic position. APs exchanging securities should consult their own tax adviser with respect to whether the wash sales rule applies and when a loss might be deductible.

The Fund may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Fund may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in kind. As a result, the Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

Foreign Taxes

Dividends and interest received by the Fund from sources within foreign countries may be subject to withholding and other taxes imposed by such countries. Tax treaties between certain countries and the United States may reduce or eliminate such taxes.

Net Investment Income Tax

U.S. individuals with income exceeding specified thresholds are subject to a 3.8% tax on all or a portion of their “net investment income,” which includes interest, dividends, and certain capital gains (generally including capital gains distributions and capital gains realized on the sale of Shares). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. You also may be subject to state and local tax on Fund distributions and sales of Shares. Consult your personal tax adviser about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled “Federal Income Taxes” in the SAI.

DISTRIBUTION PLAN

The Board has adopted a Distribution and Service Plan (the “Plan”) pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No Rule 12b-1 fees are currently paid by the Fund, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of Fund assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often Shares traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV per share is available on the Fund’s website at www.corealtfunds.com.

ADDITIONAL NOTICES

The Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of the Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of the Fund’s Shares in connection with the administration, marketing, or trading of the Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser and the Fund make no representation or warranty, express or implied, to the owners of the Shares or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly.

FINANCIAL HIGHLIGHTS

On December 18, 2019, the Fund acquired all of the assets and liabilities of the Predecessor Fund in exchange for shares of beneficial interest of the Fund (the “Reorganization”). As a result of the Reorganization, the Fund adopted the financial and performance history of the Predecessor Fund.

The financial highlights table below shows the financial performance information for the Fund’s five most recent fiscal years (or the life of the Fund, if shorter). Certain information reflects financial results for a single share of the Fund. The total returns in the table represent the rate that you would have earned or lost on an investment in the Fund (assuming you reinvested all distributions). This information has been audited by Cohen & Company, Ltd., the independent registered public accounting firm of the Fund, whose report, along with the Fund’s financial statements, is included in the Fund’s [Annual Report](#), which is available upon request.

FINANCIAL HIGHLIGHTS

For a Share Outstanding Throughout Each Period

	<u>Year Ended April 30, 2023</u>	<u>Year Ended April 30, 2022</u>	<u>Year Ended April 30, 2021</u>	<u>Year Ended April 30, 2020</u>	<u>Year Ended April 30, 2019</u>
Net Asset Value, Beginning of Year	\$ 30.47	\$ 29.44	\$ 28.77	\$ 26.98	\$ 24.70
Income (Loss) from investment operations:					
Net investment income ⁽¹⁾	0.33	0.31	0.41	0.39	0.34
Net realized and unrealized gain (loss) on investments	(1.10)	1.07	0.65	1.74	2.27
Total from investment operations	(0.77)	1.38	1.06	2.13	2.61
Less distributions paid:					
From net investment income	(0.33)	(0.35)	(0.39)	(0.34)	(0.33)
From return of capital	(0.00) ⁽²⁾	(0.00) ⁽²⁾	—	—	—
Total distributions paid	(0.33)	(0.35)	(0.39)	(0.34)	(0.33)
Net Asset Value, End of Year	<u>\$ 29.37</u>	<u>\$ 30.47</u>	<u>\$ 29.44</u>	<u>\$ 28.77</u>	<u>\$ 26.98</u>
Total return, at NAV⁽³⁾	-2.55 %	4.63 %	3.83 % ⁽⁴⁾	7.98 % ⁽⁴⁾	10.69 % ⁽⁴⁾
Total return, at Market⁽³⁾	-3.28 %	5.31 %	4.54 %	7.64 %	10.75 %
Supplemental Data and Ratios:					
Net assets, end of period (000's)	\$ 494,344	\$ 303,177	\$ 169,276	\$ 135,219	\$ 89,034
Ratio of expenses to average net assets ⁽⁵⁾	1.07 %	1.07 %	1.07 %	1.09 %	1.23 %
Ratio of net investment income to average net assets	1.08 %	1.02 %	1.44 %	1.42 %	1.34 %
Portfolio turnover rate ⁽⁶⁾	19 %	7 %	8 %	10 %	21 %

⁽¹⁾ Per share net investment income was calculated using average shares outstanding.

⁽²⁾ Amount is less than \$0.005.

⁽³⁾ Net asset value total return is calculated assuming an initial investment made at the net asset value at the beginning of the period, reinvestment of all dividends and distributions at net asset value during the period, if any, and redemption on the last day of the period at net asset value. This percentage is not an indication of the performance of a shareholder's investment in the Fund based on market value due to the differences between the market price of the shares and the net asset value per share of the Fund. Market value total return is calculated assuming an initial investment made at market value at the beginning of the period, reinvestment of all dividends and distributions at market value during the period, if any, and redemption on the last day of the period at market value. Market value is determined by the composite closing price. Composite closing security price is defined as the last reported sale price on the NYSE Arca. The composite closing price is the last reported sale, regardless of volume, and not an average price, and may have occurred on a date prior to the close of the reporting period. Market value may be greater or less than net asset value, depending on the Fund's closing price on the NYSE Arca.

⁽⁴⁾ The returns reflect the actual performance for each period and do not include the impact of trades executed on the last business day of the period that were recorded on the first business day of the next period.

⁽⁵⁾ Includes broker expense of 0.00%, 0.00%, 0.00%, 0.00%, and 0.12% and interest expense of 0.02%, 0.02%, 0.02%, 0.04%, and 0.06% for the years ended April 30, 2023, April 30, 2022, April 30, 2021, April 30, 2020, and April 30, 2019, respectively.

⁽⁶⁾ Excludes in-kind transactions associated with creations and redemptions of the Fund.
